Allowable Subject Matter

1. Claims 11, 12 and 14 – 21 are allowed.
2. The following is an examiner's statement of reasons for allowance: none of the prior art references teach or suggest the process for producing a bio-diesel oil wherein a portion of the product produced in step b is recycled directly to esterification step (a) and/or transesterification step (b) prior to separation of impurities or glycerol from the alkyl ester of step (b).

A method for producing a bio-diesel by first pre-esterifying the free fatty acids in the fat or oil then the second step of transesterification the product from the pre-esterification step is well known in the art. (see Lever GB 612-667).

Further, Sucher (AT 406870 B) teaches the fatty acid alkyl ester produced by the transesterification process can be recycled back into a transesterification step. However, in Sucher the glycerine is separated from the fatty acid alkyl ester transesterification product prior to recycling.

Furthermore, Peter et al. teaches that alkanol fatty acid esters (fatty acid alkyl esters) from the transesterification process can be returned to the transesterification step to produce a one phase reaction mixture. However, the alkanol fatty acid esters being returned are recirculated after separation of the glycerol. (Peter et al. col. 3, lines 49-67). Applicant's claimed process would return a mixture containing crude fatty acid alkyl ester along with glycerine, and unreacted glycerides to step (a) and/or step (b).

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
